TEAM LAB Chemical Add Trimble RTX for Precise Elevation Data in Wastewater Monitoring

Description

Experienced municipal wastewater surveyors at TEAM LAB have been using their CEE-USV™ and CEESCOPE™ echo sounder for several years. The process involved laborious manual measurements to determine changes in lagoon water level between surveys. This step has now been eliminated by the incorporation of the Trimble CenterPoint RTX precision corrections available with the new CEESCOPE™ 9250. TEAM LAB can now rely on the accurate absolute water level elevation provided by RTX to allow multi-year comparisons of sludge buildup in effluent lagoons. Learn more in the new CASE HISTORY HERE
